

EXL TAM Intelligence

A quick guide to using the shared insurance market corpus — no technical setup, just ask.

What this is

A shared library of EXL's insurance market knowledge — carriers, competitors, EXL clients and revenue, captives, solutions and white-space — that you can simply ask questions about in plain English. Every answer tells you exactly where it came from and how recent the data is, so you can trust and share it.

Get set up (once, about 5 minutes)

- **Open the shared site link** your team sent and click **Sync**. The *tam-project-bundle* folder then appears on your computer like a normal folder.
- **Open that folder in the Claude app**. When it opens, Claude greets you with what's available and what you can ask.
- **Check the tools are on**: in Claude, go to Customize → Skills and make sure the four TAM skills are switched on. (Your admin usually turns these on for everyone.)

How to use it — just ask

Type a question the way you'd ask a colleague. For example:

- "What data do we have here?" — a plain overview of every document.
- "Top 10 EXL clients by revenue." — a ranked, sourced answer.
- "What's our competitive situation at Travelers?"
- "Chart competitor footprint across our accounts."

Every answer is **cited** (which file it came from) and **dated** (how current it is), and it flags anything that's getting old.

Add your own data or shortcuts

- **New spreadsheet?** Drop it into the folder and say "ingest this file." It becomes searchable like everything else.
- **Keep asking the same thing?** Say "save this as a reusable skill." Claude turns it into a one-click shortcut the whole team can use.

Good to know

- It only answers from the shared data — it won't make things up. If something isn't there, it tells you and points to the closest available data.
- Some sources are older than others; the answer always shows the date so you know.
- This is internal EXL information — keep it within the team.

Stuck on setup? Ask your team admin, or see the full guides in the folder's *docs* section (README, Teammate Quickstart).
